

# CORONA INFO

ALL IMPORTANT POINTS AT A GLANCE

**Is the use of drinking glasses in gastronomy particularly dangerous at the moment?**

**How hygienic and germ-free are glasses after cleaning them in our SPÜLBOY®?**

## SPÜLBOY® hygiene principle:

- ✓ Similar to soaps, SPÜLBOY® glass washing tablets are based primarily on the effect of "surfactants". This medium has been **proven** to be a very effective virus remover.
- ✓ Thorough hand washing with soap and water – the easiest and most important method to prevent the corona virus from spreading. **From this we derive: As long as original SPÜLBOY® glass washing tablets are used to clean glasses, cold water is effectively washing off all sorts of germs and viruses.**
- ✓ The "soap-like" washing tablets have been **proven** to remove up to 100% bacteria and 99.9% viruses (Herpes simplex virus (HSP) type 1, Escherichia coli bacteria and Pseudomonas aeruginosa bacteria) with every rinse with **cold water**.
- ✓ The effectiveness of the flushing tablets has been tested and confirmed by independent institutes and authorities. We have not yet been able to test for the special new virus Covid-19 because the corona viruses are not yet available for it.

# CORONA INFO

ALL IMPORTANT POINTS AT A GLANCE

**That's how  
it works!**

## Hygienic cleaning of drinking glasses with SPÜLBOY®:

- Step 1:** use SPÜLBOY® glass washing tablets in the pre-rinse pot
- Step 2:** pre-clean the glass 3-5 times with a strong, rapid up and down movement **completely** in the brush pot
- Step 3:** drain the glass over the pre-rinse pot and rinse the inside and outside for **at least** 2-3 seconds in the rinse cycle
- Step 4:** clean the brushes **daily** with original SPÜLBOY® brush cleaner and wipe the device

**To sum up: By that viruses and bacteria  
do not stand a chance on drinking glasses.\***

Stay healthy!  
Your Spülboy-Team

*\*We cannot and should not give a 100% guarantee of virus-free results for the final consumer, since a possible viral or bacterial transmission of pathogenic germs can occur even after rinsing by coughing, touching the glasses by hand or even already existing drink infections etc. effects are basically still present.*
