

## Our claim. 100%!

100% Hygienic Design - New soft component for Spülboy NU®

Spülboy® is not only well known for 100% hygienic glass care but also for innovation and continuous development and improvements. It is therefore our aim to continually optimize our products and adapt them to the requirements of our customers.

From now on we will use an olefin-based plastic for the integrated glass protection. This specific plastic is often used in food and medical technology, prevents microbial growth and can be cleaned excellently. Therefore, according to our internal test series, we chose an OBC - olefin block copolymer.

OBC are polyolefins with alternating blocks of hard and soft segments. This block structure has the typical, flexible properties of elastomers and at the same time it offers a further improved hygienic design, best protection against glass breakage and ensures a fast, uncomplicated cleaning.

Good to know: in addition the used material meets the requirements of

- U.S. FDA FCN 424 ==> no effects on contact with food
- EU, No. 10/2011 ==> regulation for plastics in food contact

100% Cleanness - Spülboy cleanser for Classic & NU washer
