

SPÜLBOY[®] ENSURES QUALITY!

We are always enjoying setting new standards. Therefore, the **DIN 6653-3** was developed with our full support about 10 years ago to define minimum requirements for the system of cold-water manual glass washers.

To ensure the practicability and hygiene of glass washers, to ensure 100% clean glasses, for easy operation and maintenance by the catering operators and for the joy and satisfaction of their guests.

This success will now be updated:

Since Corona, operators, their customers, and authorities are more sensitive to hygienic standards and its proof. For the revision, the **DIN committee** is working out higher tests and proof methods and will determine how these can be guaranteed in the best possible way.

SPÜLBOY[®] is again invited to actively support this process. We are thankful for this possibility and are confident that within next year the committee will successfully placing SPÜLBOY[®] glass washer on an even higher and more profound base.
